

Compression Tank Connectors

Standard straight compression tank connectors are suitable for a wide range of applications including heating systems and hot & cold water storage tanks.

The compression fitting is manufactured from brass and consists of a body with a built in stop to receive the pipe tube, a compression olive and a compression nut. The nut is then tightened to compress the olive onto the pipe which creates a water tight joint.

All connectors are supplied with EPDM seal washers

Compression Fitting Features & Benefits:

- Maintenance free
- Fast and simple installation
- Heat free, no soldering needed
- Joint can be dismantled and re-build
- Joints can be made on wet pipework
- Can be used with chrome pipework

Part No.	Description
BBZ1750	15mm Compression Tank Connector
BBZ1751	22mm Compression Tank Connector
BBZ1752	28mm Compression Tank Connector
BBZ1753	35mm Compression Tank Connector
BBZ1754	42mm Compression Tank Connector
BBZ1755	54mm Compression Tank Connector
